SUMMARY

DevOps Engineer with **3+** years of hands-on experience building web/CLI automation, CI/CD, and multi-architecture testing platforms for cross platform offensive tools. Designed and led development of a high-performance testing framework and package management ecosystem that improved reliability and accelerated delivery across multiple teams. Known for streamlining complex workflows, optimizing infrastructure, and driving operational excellence in secure and constrained environments. Seeking a role within a high performing engineering organization where I can grow, be challenged, and contribute meaningful impact.

TECHNICAL SKILLS

- **Programming Languages:** C, GoLang, Python, Shell/Bash
- **Cloud Platforms:** Google Cloud Platform (Artifact Registry, Cloud Run, gcloud, IAM, Secret Manager, Workload Identity Federation), Microsoft Azure (AKS, Azure CLI, Azure Container Registry, Azure Load Balancer, Resource Groups)
- **Infrastructure:** Ansible, Docker, Kubernetes, Terraform/OpenTofu, VMware vSphere/ESXi
- **CI/CD & Tools:** Docker Hub, ELK Stack, Git, GitHub Actions, GitLab CI/CD, goose, Grafana, Make, Pexpect, Prometheus, Robot Framework, Selenium, semgrep, staticcheck, gosec
- **Operating Systems:** Linux (RHEL/CentOS, Ubuntu/Debian distributions), Windows

WORK EXPERIENCE

Def-Logix

08/2022 - 10/2025

DevOps Engineer/Software Engineer

San Antonio Texas

- Built Docker images to containerize project dependencies, improving environment consistency and cutting setup time by over 50% across development and testing workflows
- Reduced manual testing by 80% by architecting scalable testing infrastructure using CICD, Terraform, Ansible, and Go, and developed automated validation and provisioning workflows (Python/Go/Terraform) to support 25+ OS/CPU combinations
- Automated Jira integrations using REST APIs to publish Zephyr test executions and update test results, enabling faster identification and validation of test failures, assuring product compliance to the requirements
- Integrated real-time ticket creation for critical Semgrep findings, enhancing reporting workflows and accelerating remediation cycles, which directly improved software hardening and security posture
- Deployed and maintained an ELK Stack (Elasticsearch, Logstash, Kibana), integrating automated test results from multiple operating systems to visualize daily pass/fail metrics and improve cross-platform test visibility
- Worked directly with developers during QA and pre-production testing to quickly troubleshoot failures, resolve issues faster, and improve overall release quality of red team tools

- Utilized SentinelOne, Azure Sentinel, and Microsoft Defender to identify and analyze security threats, improving visibility into endpoint and network activity and strengthening overall threat response posture
- Leveraged a VMray sandbox to assess suspicious files, enhancing malware identification and strengthening incident response capabilities
- Used OSINT tools to identify potential IOC's (IP addresses, domains, files, etc.) in the environment
- Created International Travel Form, POS device training guide, NIST framework for risk management/identification
- Conducted third-party risk assessments using ProcessUnity, evaluating vendor security controls and compliance posture. For vendors lacking direct contacts, independently reviewed AWS SOC 2 Type II reports and supporting documentation to complete risk analyses and ensure compliance coverage

EDUCATION

University of Texas at San Antonio	2022
Bachelor of Science in Computer Science	

CERTIFICATION

GIAC Cloud Threat Detection	06/2025
GIAC Cloud Security Automation	12/2024
GIAC Public Cloud Security	07/2024
GIAC Cloud Security Essentials	04/2024
